

Agile Project Management (AgilePM®) Practitioner - accredited training with exam

Training recipients

For persons responsible for commissioning, implementation and supervision over the course of projects, regardless of the industry. Sponsors, project managers and team members and members of project offices. Analysts, programmers and testers. For all those working in a design environment who want to use AgilePM®'s agile project management concept and want to pass the AgilePM® Practitioner exam.

Benefits

The aim of the training is to prepare students for the AgilePM® Practitioner exam based on the Agile Project Management methodology in version 2.0, developed in cooperation with APMG-International and DSDM® Consortium. Ends with the AgilePM® Practitioner exam. Passing the exam means getting an international AgilePM® Practitioner certificate.

Training program

1. Introduction.
2. Roles and responsibilities from the point of view of the Project Manager.
3. AgilePM life cycle.
4. Effective use of products.
5. Delivery on time, MoSCoW and Timeboxing.
6. People, teams and interactions.
7. Requirements and user stories.

8. Estimation.
9. Project planning.
10. Quality.
11. Risk Management.
12. Adaptation of the approach.
13. Practitioner exam (in Polish or English).

Expected preparation of the participant

It is required to have an AgilePM Foundation or DSDM Atern Foundation certificate or DSDM Advanced Practitioner.

During the training, it is required to have an authorized Agile PM manual.

The manual is not included in the standard materials, it can be purchased in Polish or English language versions.

Note: it can be conducted in Polish or English, depending on the agreement. This also applies to materials and presentations for participants and the language in which the exam will be conducted. The exam is carried out on the last day of class.
