Agile Project Management® v3 Foundation – accredited training with exam

The **AgilePM® v3 Foundation training** consists of two parts.

Part One - Scrum Fundamentals focuses on the Scrum framework. Participants become familiar with its key elements, including its philosophy, principles, values, roles, artifacts, as well as methods of working and collaborating in the process of product delivery.

The **second part of the training**, which lasts two days, concentrates on managing projects in an agile way, in accordance with the AgilePM® v3 standard. Participants also prepare for the certification exam. This part covers a structured approach to project management while maintaining agile principles. The training incorporates a broader business perspective, emphasizing value and benefits derived from project outcomes. It also addresses how to tailor the AgilePM® standard to projects of various sizes and across different industries.

Training recipients

The training is aimed at:

- Project Sponsors
- Project Managers
- Project Team Members
- Members of project offices
- All those involved in the initiation and implementation of projects, regardless of the industry
- Everyone working in a project environment who wants to apply the AgilePM® agile project management concept

Benefits

The training is aimed at sponsors, project managers, team members and members of project offices and all those involved in the initiation and implementation of projects, regardless of the industry. For everyone working in a project environment who wants to apply the AgilePM® agile project management concept.

Benefits for the participants:

- Understanding of the agile philosophy and its consistent application in an organization
- Understanding of Agile Project Management® in relation to other project management standards and the differences between this approach and traditional/alternative methodologies
- Equipping the participant with a set of basic working principles, theoretical knowledge and knowledge of the processes necessary to conduct projects according to this approach
- Expanding communication in the project and increasing the involvement of stakeholders key to the success of the project
- Learn the principles necessary to manage a project according to Agile Project Management® guidelines and gain the skills to adapt them to a given situation
- Learn how to iteratively make changes to a project that result in the creation of products that are more tailored to customer needs
- Make changes faster and less expensively and reduce the possible risk of project failure
- After passing the exam – a personalized international certificate confirming acquired knowledge and skills

Benefits for organizations:

- Use of an organized and scalable project management method
- Achieving the ideal balance between standards, rigor and transparency
- Management of the full project life cycle, from project initiation to execution, modification and completion
- Ensuring clear roles and responsibilities for all project participants
- Quality and results control to ensure the profitability of the project at every stage of its implementation
- Efficient cooperation between project teams and business stakeholders
- Faster and more effective change implementation through the use of AgilePM® methodology
- Building business agility that will allow the entire organization to keep up with the changing environment faster and more effectively
