

Certified Tester Foundation Level - training to prepare for the ISTQB® (Certified Tester Foundation Level) exam

Training recipients

The training is addressed to software testers who want to confirm their knowledge by obtaining a CTFL (Certified Tester Foundation Level) certificate.

Benefits

Preparation for the ISTQB CTFL exam.

Training program

1. The basics of testing.
2. Testing in the software life cycle.
3. Static testing techniques.
4. Test design techniques.
5. Test management.
6. Organization of testing.
7. Test planning.
8. Monitoring the course and supervision of testing.
9. Tools supporting testing.

Expected preparation of the participant

A basic understanding of key concepts related to IT processes will be a significant advantage, although most definitions are provided in the Syllabus and available in the ISTQB glossary.

Regardless, the exam tasks assume some fundamental skills in mathematics, logic, and the ability to analyze simple graphs.

Duration

3 days / 20 hours
