

Design patterns in JavaScript

Training recipients

The training is intended for people who want to enrich their toolkit with the ability to use design patterns.

Benefits

Participants learn good production practices and architectural structures proper to the JavaScript language in the ES.Next standard, which are the foundation of scalable web applications.

Training program

1. JavaScript characteristics in the ES.Next standard
2. Modern working environment (ESM, bundler, static analysis)
3. Modular application structure patterns (ESM), CommonJS as legacy
4. Elements of functional programming
5. Engineering design patterns
 - creational: Singleton, Factory, Builder, Prototype
 - structural: Facade, Proxy, Adapter, Bridge, Decorator, Composite
 - behavioural: Command, Observer, Iterator, State, Strategy
6. Patterns related to the view layer implementation (MVC, MVVM)
7. Patterns for building web applications
 - rendering architectures: SPA, SSR, SSG
 - state management

Expected preparation of the participant

Knowledge of JavaScript.

Training Includes

- Training method: Workshops.
- Mode: Distance Learning (DL)
- Level: Intermediate
- Duration: 3 days (21 hours)
- Language: English

Duration

3 days / 21 hours

Language

- Training: English
