

Facilitation Foundation - accredited training with exam

Facilitation is a tool that can be applied in every area of business, not just in single meetings but also as a series of actions ensuring consistency within a team, group, or organization. According to the agile approach to project management, it is an integral element of maintaining proper communication within a project. Through facilitation, team efficiency increases, actions become more effective, meetings are shorter but more cohesive, and they lead to high-quality results. Moreover, people learn to use the process independently, reach consensus, and build better relationships.

Training recipients

The training is intended for managers, specialists, project managers, team leaders, change managers, business analysts, IT professionals, Scrum Masters, Product Owners, and anyone else who wants to improve the efficiency of work in their specialized field's groups and teams. It will be useful for anyone who works daily in teams addressing business issues and for managers and leaders at any management level who want to achieve real business results through team or group work. The training is the first step to becoming a professional Facilitator.

Benefits

Participants will learn the conditions of group work, build awareness of certain behaviors and processes during meetings, and most importantly, learn practical methods, tools, and techniques for working with a group. A significant value of this training is that participants leave with knowledge they can apply in their daily work the very next day. The course concludes with the Foundation exam. Passing the exam

means earning the international Facilitation Foundation certificate.

Training program

1. Basic concepts and terms
 - What is facilitation?
 - Who is a Facilitator?
 - Meeting: tasks vs. process
 - Ways of working: Formats and Formations
 - Process Iceberg® Model – factors influencing meeting efficiency
