Expected Listener Preparation

Managerial experience.

Training Language

- Training: English

- Materials: English

Duration

2 days / 14 hours

Training agenda

The psychology of making decisions

- General dimensions of decisions.
- Cooperation and the roles of cerebral hemispheres in decision-making process.
- Aspects of indecisiveness.
- The influence of emotions on decision-making process.

Analyzing decisive situation

- The types of decisive situations: certain, risky and uncertain.
- A series of processing information during decision-making process.
- Practical methods of analyzing information.
- Stages of making decisions (recognition, designing, choosing).

Decision-making styles

- Diagnosing the individual style of making decisions.
- Group styles of making decisions.
- Advantages and disadvantages of the group decision-making process.
- Creativity during decision-making process.

Decision-making techniques and tools

- Techniques of generating solutions (for example, Bond's Technique, de Bono Hats, Einstein's Technique).
- Tools supporting making decisions (for example, Osborn's Questions, 90 seconds plus technique).
- The theory of games (prisoner's dilemma).
- Chaos Theory (turbulences).

Obstacles and mistakes in making decisions

- Decision-making traps (for example, anchoring, attachment to status quo).
- Obstacles impeding making objective and rational decisions (for example, informational, competitive, social, hierarchical).
- Making decisions in conditions of uncertainty.
- A tendency to take the risk and making decisions.

Optimizing the decision-making process

- Post-decisive dissonance - how to minimize it and be certain about the validity of decision made.
- Increasing the effectiveness of decisions made (for example, Vroom-Yetton-Jago model).
- Tools of optimizing decisive processes (for example, scenario planning, decisive trees).
