#### Benefits

The CCISO Certification is an industry-leading, security certification program that recognizes the real-world experience necessary to succeed at the highest executive levels of information security. Bringing together all the components required for a C-Level position, the CCISO program combines audit management, governance, IS controls, human capital management, strategic program development, and the financial expertise vital to leading a highly successful information security program. The job of the CISO is far too important to be learned by trial and error. Executive-level management skills are not areas that should be learned on the job.
