Create and Manage Automated Processes by using Power Automate

The Microsoft Create and Manage Automated Processes by using Power Automate (PL-7002) training is an authorized course that introduces participants in a practical way to automating business processes using Microsoft Power Automate. Participants learn how to design, configure, and manage cloud flows, as well as understand how to integrate Power Automate with Microsoft Dataverse and other services in the Microsoft 365 ecosystem. The training focuses on creating effective automations that increase productivity, reduce errors, and accelerate the completion of everyday tasks.

Training recipients

The Microsoft Create and Manage Automated Processes by using Power Automate (PL-7002) training is intended for:

- Microsoft 365 users and business professionals who want to automate daily tasks and processes,
- IT analysts and consultants who support teams in creating and maintaining Power Automate flows,
- administrators and Power Platform solution owners who want to efficiently manage automation environments,
- application and process creators who want to integrate Power Automate with Power Apps, SharePoint, or Dataverse,
- anyone who wants to increase organizational efficiency and innovation through business process automation.

Benefits

- Creating cloud-based automation flows – you will learn how to design and implement Power Automate flows that meet the needs of your organization.
- Configuring triggers and actions – you will learn how to initiate business processes, define conditions, and process data from various sources.
- Managing approvals and notifications – you will learn how to create flows that handle approval processes, notifications, and internal communication.
- Integration with Microsoft Dataverse and other services – you will learn how to connect Power Automate with Dataverse, SharePoint, Outlook, or Teams to centralize workflows.
- Optimizing and securing flows – you will learn how to monitor, share, and maintain flows in accordance with best practices and security principles.

Training program

1. Get started with Power Automate
2. Get started with Microsoft Dataverse
3. Build approval flows with Power Automate
4. Build flows to manage user information
5. Power Automate's deep integration across multiple data source

Expected preparation of the participant

- Basic data modeling, user experience design, requirements analysis, and process analysis skills.
- A personal growth mindset and are comfortable using technology to solve business problems.
- An understanding of the operational need and have a vision of the desired outcome. They approach problems with phased and iterative strategies.
- We recommend prior participation in trainings: PL-900, PL-7001, Pl-7003

Training Includes

Training method:
Theory, demo, exercises
