ISTQB® Certified Tester - Advanced Level Test Automation Engineering - V 2024/V 2.0

Training recipients

The ISTQB® Certified Tester Advanced Level – Test Automation Engineering (CTAL-TAE) v2.0 certificate is intended for professionals involved in test automation, such as test engineers, testers, consultants, developers, and test managers.
It validates skills in planning, designing, implementing, and improving solutions that automate software testing.

Benefits

Benefits of attending the ISTQB® CTAL-TAE v2.0 training:
- Acquire advanced knowledge in test automation.
- Develop skills to design and implement effective test automation solutions.
- Gain a better understanding of automation architecture and maintenance strategies.
- Prepare for the ISTQB® CTAL-TAE v2.0 certification exam.
- Increase your value in the job market and enhance career development opportunities in the QA/testing field.
- Build competencies that support the quality and efficiency of software development processes.

Expected preparation of the participant

Expected candidate preparation:
- Possession of the ISTQB® Foundation Level (CTFL) certificate – a formal requirement to take the

exam.
- Practical experience in software testing, especially in the area of test automation.

Czas trwania

1 dni / 3 godzin

Language

The training is conducted in Polish or English (depending on the group), while the training materials and exam are available in English — in accordance with the official ISTQB® standard.
