Planning and Execution in SAP S/4HANA TM

- This course will help you to prepare for the implementation stage of your SAP Transportation Management project or enable you to configure the system in your role as an application consultant. This course explains all necessary configuration and master data to enable manual and automatic transportation planning in SAP Transportation Management. You will be able to set up the transportation network.
- Furthermore, you will be able to configure transportation relevance for both, orders and deliveries, create freight units, and manage packaging. You will configure various planning scenarios (interactive and automatic) as well as explore subcontracting processes and load optimization. You will be able to facilitate transportation execution using SAP Transportation Management including the integration with SAP Extended Warehouse Management, output management, and event tracking.
