

Scrum Product Owner

Training recipients

- People who will take the responsibility of Product Owner
- Project managers who would like to know the aspects of creating quality in agile methodologies
- Members of teams working in Scrum methodology, who would like to acquaint themselves with range of product owner's responsibilities
- People drafting plans and monitoring software development

Benefits

Scrum Product Owner

Apart from creating user stories, Product Owner also pays attention to quality aspects, understanding tasks undertaken by the team, and a series of issues specifying product reception. These, as well as the other aspects, are discussed as part of the course. Students acquaint themselves with differences between methodologies, ways of approach to the problem, as well as are provided with analytical knowledge, which is necessary for effective work, as product owner.

A particular emphasis during the course is put on „thinking-tools” which enable quick and faultless problem analysis, identifying conceptual gaps, as well as those which diagnose present and future problems.

Training program

1. Agile product management – basics of methodology with highlighting the roles
2. Product quality criteria – management of values
3. Requirements – management and analysis
4. Planning in agile methodologies
5. Increase and release value
6. Managing software releases
7. Ownership price and technological debt

8. Planning in agile approach

9. Controlling work process

Expected preparation of the participant

- General knowledge of Scrum methodology
- Participation in at least one project in which software was the main product
